

Three-Year-Old Curriculum

The three-year-old curriculum was developed to provide developmentally appropriate experiences so that learning takes place while our children are having fun.

Thematic units are used to provide the total child with experiences for development in the following areas: cognitive development, fine motor, large motor and social and emotional skills.

The following areas of study are considered in curriculum development:

Language Arts

Mathematics

Science

Social Studies

Fine Arts

Health and Safety

Personal and Social Development

Physical Development (Fine and Large Motor)

Technology Applications

Music, art and weekly chapel are also incorporated into the learning process.

In lieu of field trips, classroom enrichment activities are added, for example: visits from the fire department, the zoo mobile, a visit from a professional such as a dentist, puppet shows and other presentations, as arranged.
